

# Week 2 Unit 2: **Existing Code: What About Performance?**

# Existing Code: What About Performance?

## Outline

---

### Content

- Performance Considerations & Guidelines
- Static Code Checks for Performance Optimization Potential

# Existing Code: What About Performance?

## Migration to SAP HANA

### 1. Detect

- Functional correctness
- **Performance optimization potential**

### 2. Optimize

- Database-oriented programming

### 3. Explore

- Use SAP HANA-specific features
- Rethink & innovate

# Existing Code: What About Performance?

## Performance Considerations

---

### Performance!

Does SAP HANA automatically improve performance of my ABAP coding?

### Recommendations?

- Performance guidelines
- Tool-based performance analysis

# Existing Code: What About Performance?

## Classical Performance Guidelines and Additions

Keep result sets small

Minimize amount of transferred data

Minimize number of data transfers

Minimize search overhead

Keep unnecessary load away from DB

Even more important;  
one specific aspect of  
**code-to-data** paradigm

Less important; but still  
relevant **in some cases**

Don't burden the DB  
with **unnecessary**  
operations

# Existing Code: What About Performance?

## Code Inspector Check Variant PERFORMANCE\_DB

Additional  
Material

Checks ABAP code to determine where code can most likely be optimized, for example

### SELECT statements

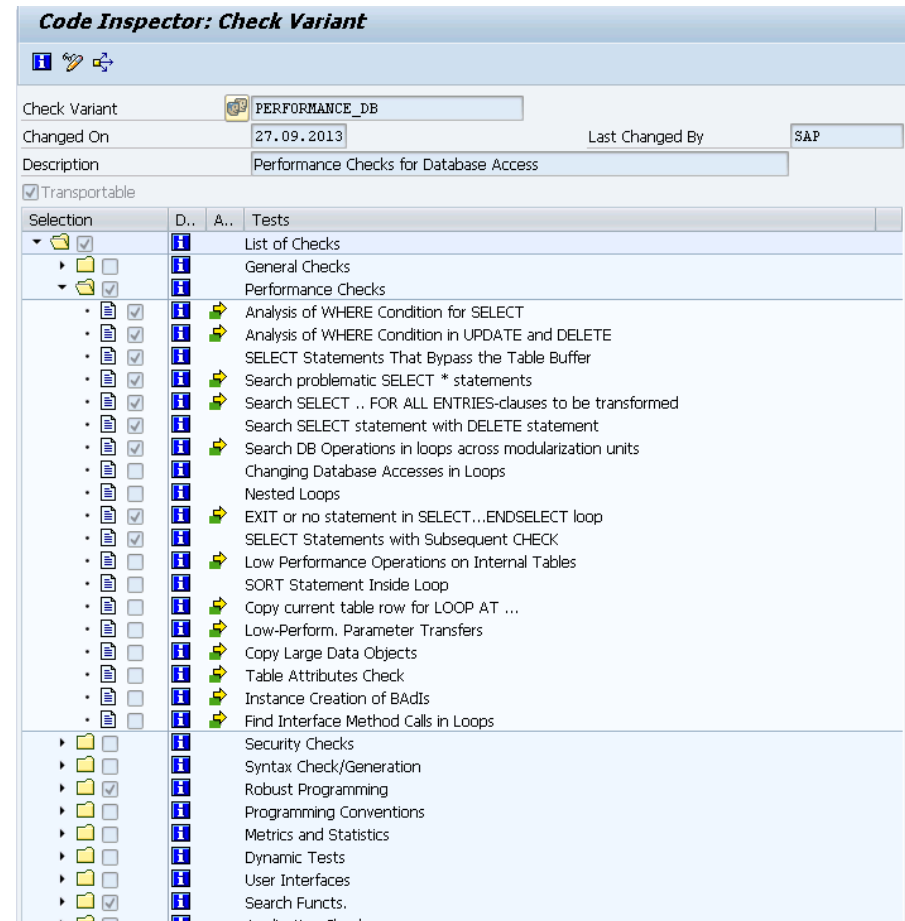

- Nested SELECT statements (across modularization units)
- EXIT in SELECT loop

### Data transfer

- Problematic SELECT \* statements
- Missing WHERE condition

### Other performance aspects

- Statements that bypass the table buffer

# Existing Code: What About Performance?

## Static Code Analysis: Demo

---

### Check for Optimization Potential

- Overview of the available performance checks
- Analysis example of ABAP coding with the ABAP Test Cockpit

# Existing Code: What About Performance?

## Static Performance Check Coverage

# Existing Code: What About Performance?

## Static Performance Check Coverage

 Runtime analysis using SAT or ABAP Profiler, for example

# Existing Code: What About Performance?

What's Next?

---

Week 2 Unit 3

## SQL Footprints in Your Productive System

# Thank you
