

Week 2 Unit 3: SQL Footprints in Your Productive System

SQL Footprints in Your Productive System

Outline

Additional
Material

Content

- Shortcomings of Static Code Checks
- SQL Monitor
- Analysis of SQL Monitor Data

SQL Footprints in Your Productive System

Migration to SAP HANA

Additional
Material

1. Detect

- Functional correctness
- **Performance optimization potential**

2. Optimize

- Database-oriented programming

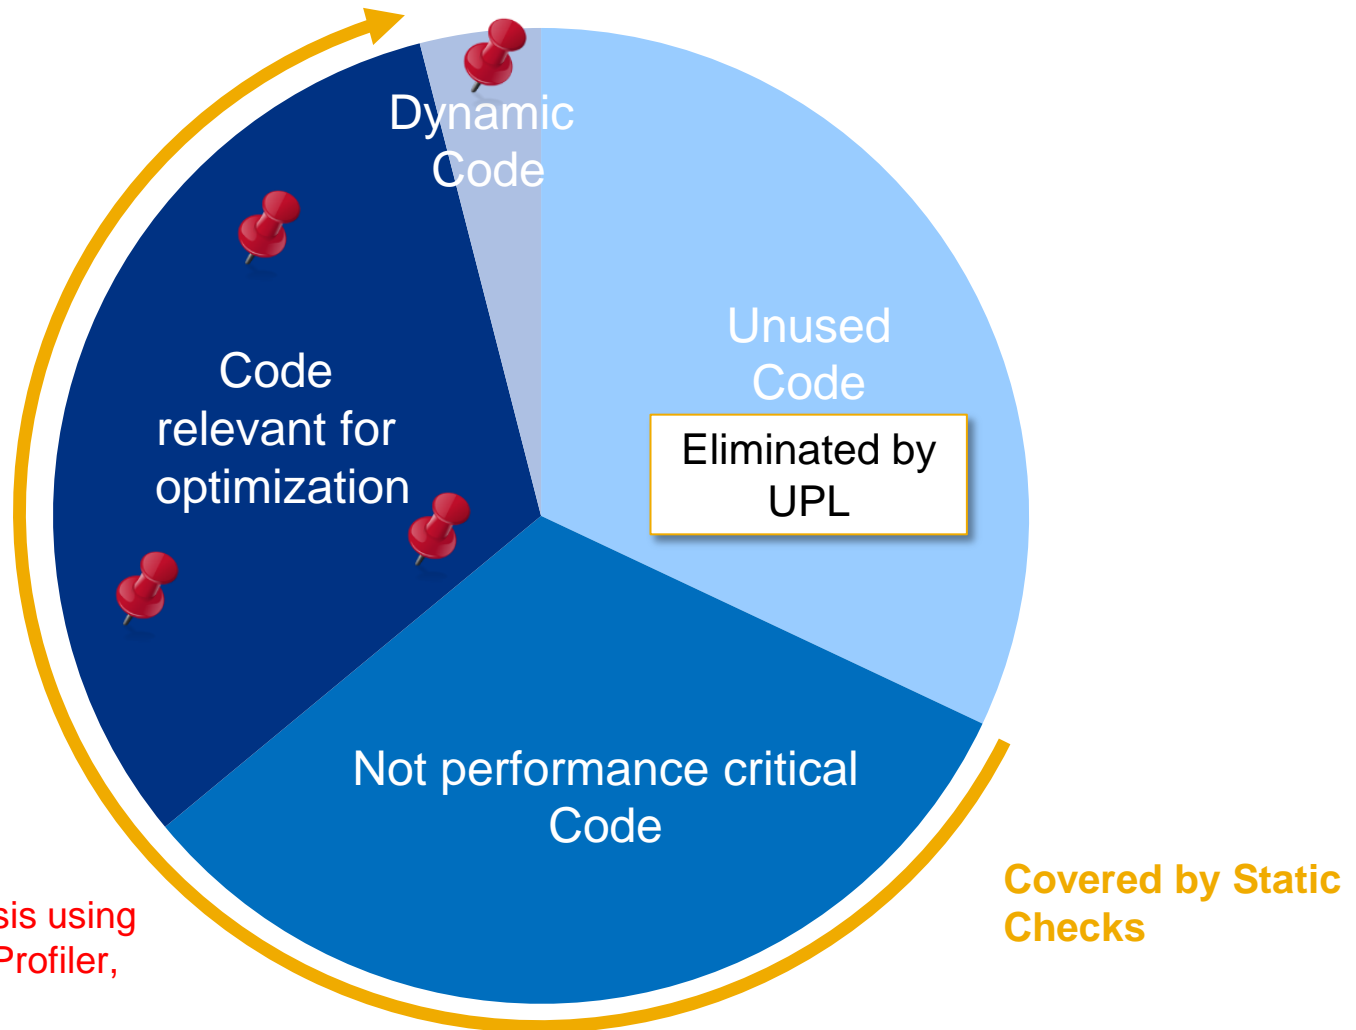

3. Explore

- Use SAP HANA-specific features
- Rethink & innovate

SQL Footprints in Your Productive System

Static Performance Checks

SQL Footprints in Your Productive System

Example of a Productive ERP System

Example: A productive ERP system with 6000 concurrent users

Two weeks in this system means:

- 50k different business processes
- 130k different ABAP SQL statements (>15% in customer code)
- 13B SQL requests (~1B / day)
- 140B records (~10B / day) read/changed

→ **Where to optimize?**

SQL Footprints in Your Productive System

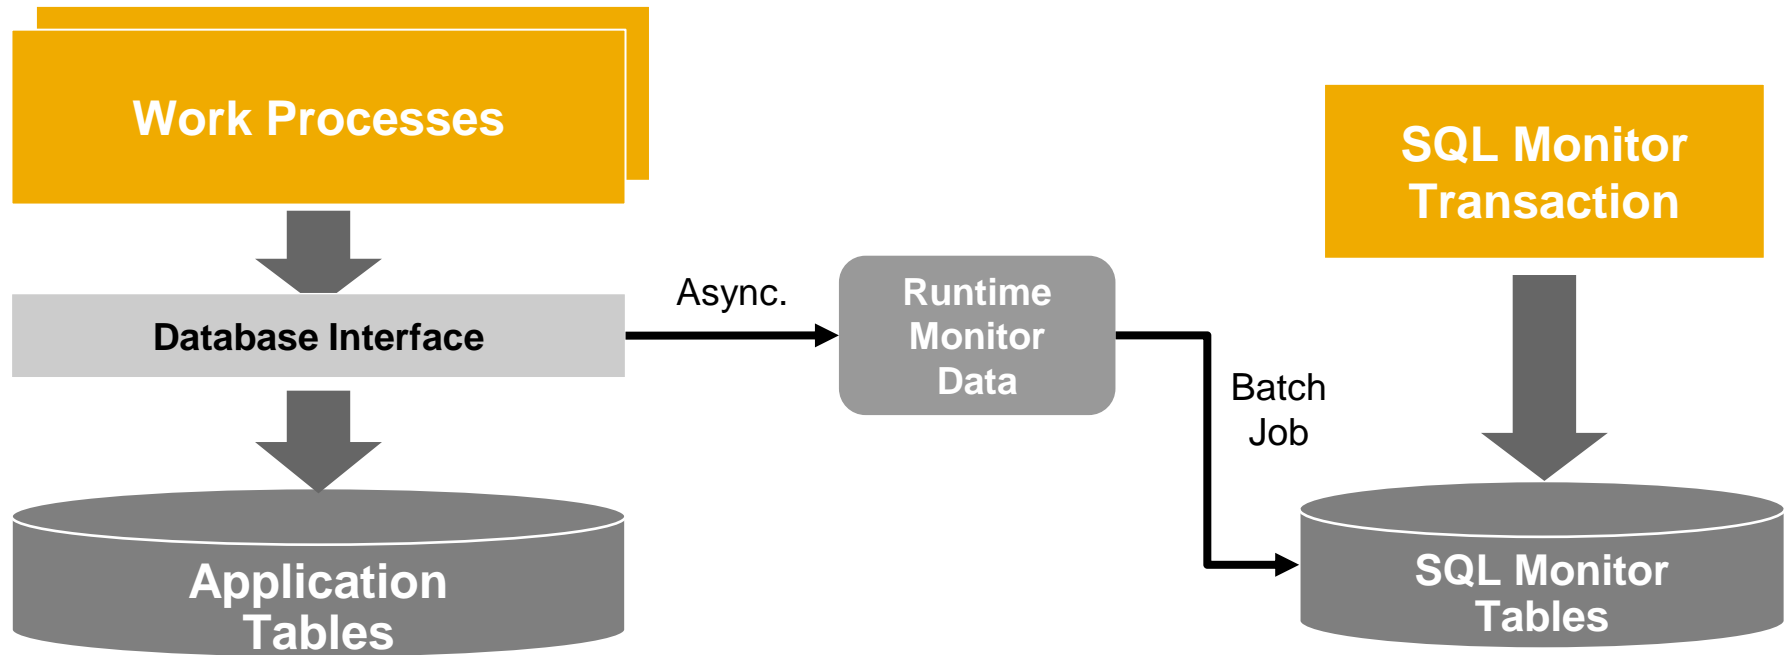

SQL Monitor

Runtime Code Analysis

- SQL profile of productive system
- Find SQL performance optimization potential
- Available with ABAP 7.02 SP12 and above
- More information:
 - SAP Note 1885926
 - SCN Blog [SQL Monitor Unleashed](#)

SQL Footprints in Your Productive System Architecture

SQL Footprints in Your Productive System

Administration of the SQL Monitor (1)

Additional
Material

Activate/deactivate SQL Monitor via transaction **SQLM**

SQL Monitor can be activated either for **all** application servers or just **selected** ones

Upon activation, an **expiration date** and an **upper limit** of records can be specified

For further information about initial setup (required authorizations, and so on), see <http://scn.sap.com/docs/DOC-47444>

The screenshot displays the 'SQL Monitor' SAP transaction interface. At the top, there is a navigation bar with icons for 'Application Help', 'Servers', 'Log', and 'Data'. Below this, the 'State' section provides a summary of the monitor's configuration and status. The 'Activation / Deactivation' section contains buttons for 'All Servers', 'Select Servers', and 'Deactivate'. The 'Data Management' section includes buttons for 'Display Data', 'Export Data', and 'Delete Data'. The 'Snapshots' section at the bottom has buttons for 'Display Snapshots' and 'Manage/Create Snapshots'.

State	
Number of Records	81.921
Last State Change	11.11.2013 / 12:36:06 (CET) by user BRESCH
Last Data Action	12.11.2013 / 08:21:55 (CET) by user BRESCH (refresh data)
Scheduled Data Refresh Job	Scheduled on Job Event SAP_RTM_COLLECT_ALL_FINISHED
Scheduled Deactivation	18.11.2013 / 11:20:14 (CET) by user BRESCH
Activation State	Active for 3 selected servers including local (3 servers a

Administration of the SQL Monitor (2)

Additional
Material

Transaction **SQLM** offers simple management of SQL Monitor snapshots

Snapshots can be:

- Created based on local data
- Imported from file (from other systems, for example)
- Exported to file
- Removed

To reduce data volume, **basic filter** criteria can be applied before snapshot creation

The screenshot shows the 'SQL Monitor: Snapshot Management' dialog box. It has a title bar and a toolbar with 'Create Snapshot' and a folder icon. Below the toolbar are two tabs: 'Create' (selected) and 'Edit / Delete'. The 'General' section contains a 'Description' field with the text 'SQLM Snapshot [#SYSTEM] [#DATE] [#TIME]' and a note that these placeholders will be replaced with actual values. The 'Data Source' section has two radio buttons: 'File Import' (selected) and 'Local System'. A 'Path' field with a folder icon is next to the 'File Import' option. The 'Further Options' section contains an 'Object Set' table with three rows: 'Package', 'Object Type', and 'Object Name'. Each row has two input fields separated by 'to' and a selection icon. The 'Import Only Top Records by' section has two radio buttons: 'Total Number of DB Executions' (selected) and 'Total DB Execution Time'. Below these is a 'Maximal Number of Records' field with a dropdown arrow and the text '(Aggregated by Source Position)'.

SQL Monitor: Snapshot Management			
Create Snapshot			
Create Edit / Delete

Analysis of SQL Monitor Data

Additional
Material

To display SQL Monitor data

- Use transaction SQLMD or
- Navigate from transaction SQLM

Specify **filter criteria**:

- Development objects
- Requests
- Database tables

Choose **aggregation** type

Select **initial sorting**

SQL Monitor: Data Display

SQL Monitor: Demo

SQL Monitor

- Activation / deactivation
- Export / import SQL Monitor data snapshots
- Analyze SQL Monitor data

The ABAP SQL Monitor is available in two (more or less identical) variants:

- 1. Out of the box as part of SAP_BASIS (recommended when available)**

ABAP 7.02, 7.03/7.31, 7.4

- 2. As part of the ST-PI add-on (fallback for lower releases)**

ABAP 7.00 (and above)

Note: ABAP kernel 7.21 is required for releases lower than 7.4

→ Refer to SAP Note 1885926 for all details about availability and necessary preparation steps
